58. EpicTask Dashboard

Problem statement: Create a control panel for tracking big company projects. It needs to show the most important steps (the critical path) and how different tasks rely on each other.

Must Have Features

- a. **Task Folder Viewer:** A clear list that shows which tasks belong to which projects and who is responsible for them.
- b. **Schedule Undo/Redo:** A log that saves every change made to a task's estimated time, allowing users to safely undo schedule updates.
- c. **Alert Organizer:** A system that lines up all notifications (like task updates) in the order they should be sent to teammates.
- d. **Template Checker:** A fast search tool that instantly verifies a new project setup against approved company templates.
- e. **Deadline Risk Sorter:** A tool that ranks tasks based on how much their deadlines have been changed or delayed.
- f. **Task Lock Hub:** A central system that shares which tasks are currently blocked, or waiting for another task to be completed.
- g. **Quickest Project Completion Finder:** A tool that calculates the absolute fastest timeline to finish all milestones.
- h. **Team Workload Assigner:** A smart system that assigns new tasks to team members who have the fewest other things to do.
